

Pushing 123FormBuilder submissions to Wix Code

- Tutorial -

Before we start, let's check the basics:

- You have a Wix site
- You are using the 123FormBuilder application on Wix
- You want to send data collected by 123FormBuilder forms to Wix Code

To achieve your goal of sending data collected by 123FormBuilder to Wix Code, please follow the steps below. To help you, we have also created screenshots.

Step 1. Edit your Wix site, and add a new page. Along this tutorial, we will assume you named the new page as ThankYou

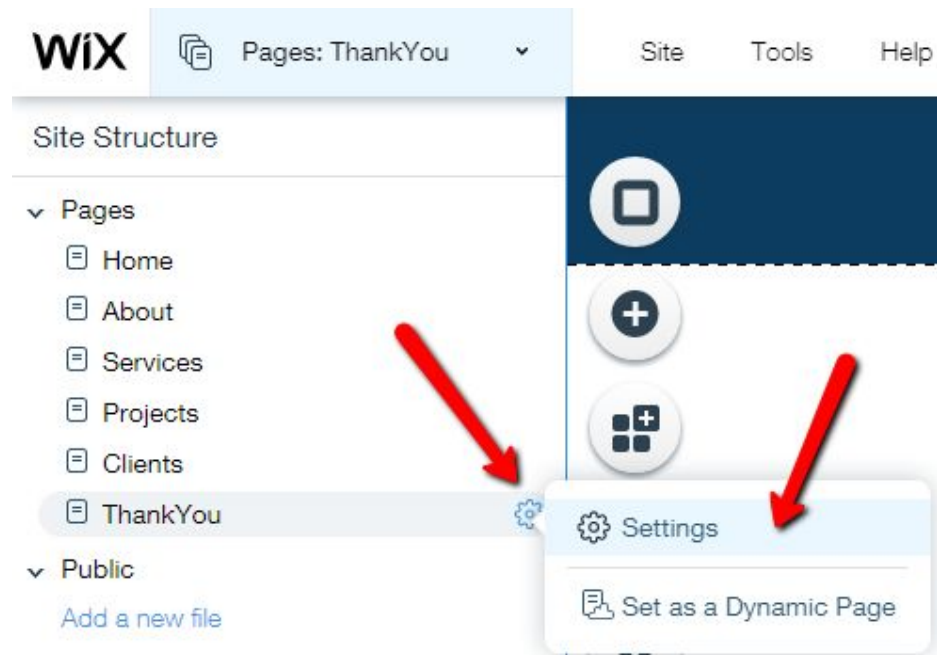

Step 2. Customize your ThankYou page how you wish (add a message, make it pink, etc)

Step 3. On the ThankYou page, open the Code panel (down the page) and paste the [123FormBuilder Wix-Code JavaScript snippet](#)

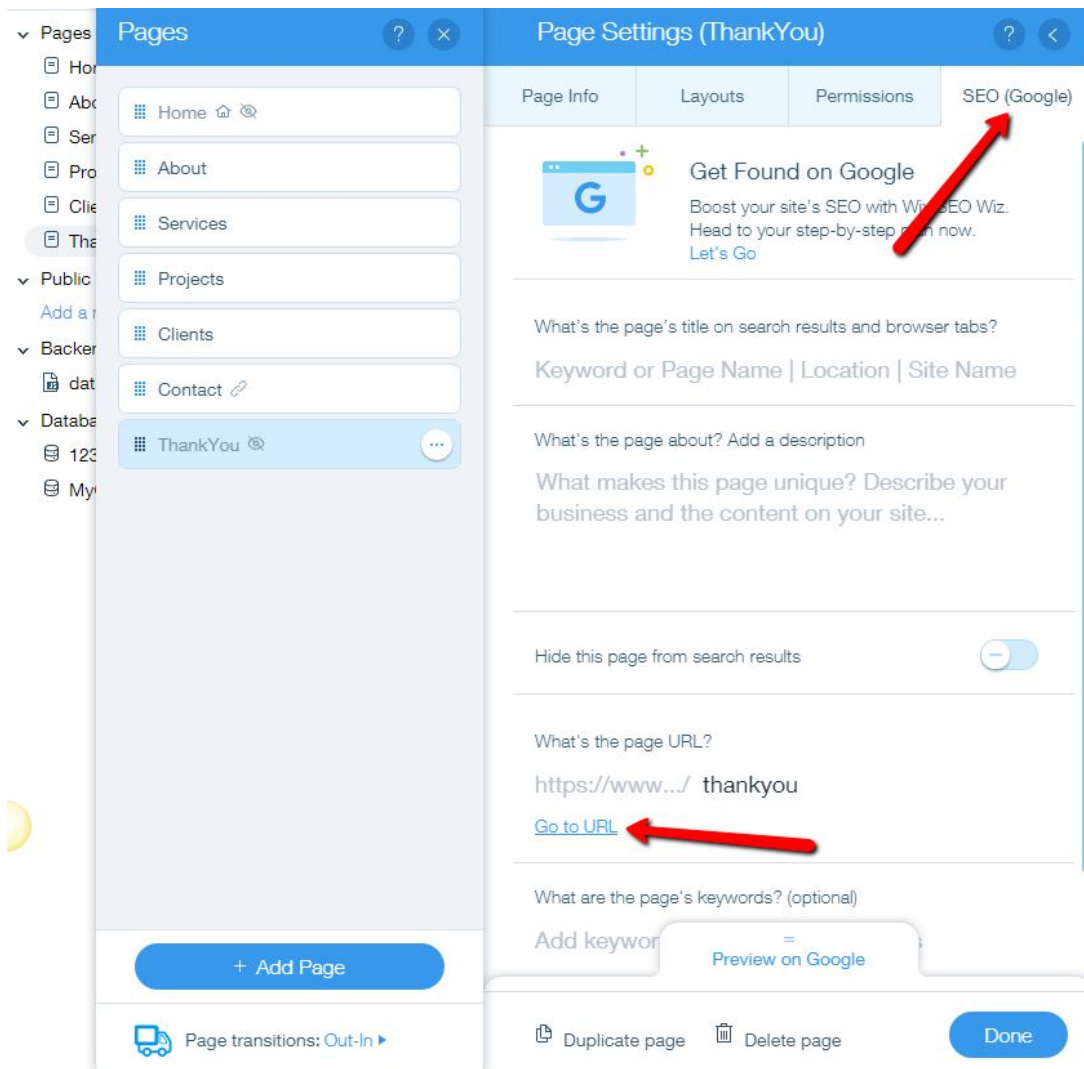

The screenshot displays the Wix website editor interface. On the left, the 'Site Structure' panel shows a list of pages: Home, About, Services, Projects, Clients, and ThankYou. A red box labeled 'Create a new page' with an arrow points to the 'ThankYou' page. The main preview area shows a dark blue header with 'JAMES CONSULTING' and an 'About' link. Below the header, the text 'Thank you! We will be back at you!' is displayed. A red box labeled 'Customize how it looks' with an arrow points to this text. At the bottom, the 'Code' panel is open, showing a JavaScript snippet. A red box labeled 'Paste the 123FormBuilder Wix-Code JavaScript snippet' with an arrow points to the code. The code is as follows:

```
1  /*
2  * This code is created by 123FormBuilder
3  * It is experimental code, created in order to push form submissions from 123FormBuilder to Wix Code
4  * For support inquiries, feedback, suggestions, please contact us at: wixcode@123formbuilder.com
5  * https://github.com/123formbuilder/wix-code
6  * */
7
8
9
10 import wixData from 'wix-data';
11 import wixLocation from 'wix-location';
12
13 $w.onReady(function () {
14
15     let path = wixLocation.path;
16     let query = wixLocation.query;
17
18     let collectionName = 'Default';
19     if ("collection" in query) {
20         collectionName = query['collection'];
21     }
22
23     if ("data" in query) {
24         let obj = JSON.parse(atob(query['data']));
25         console.log('Sending 123FormBuilder submitted data to WixCode');
26         wixData.insert(collectionName, obj);
27     }
28 }
```

Step 4. Open the Page Settings for your ThankYou page.

Step 5. From the SEO (Google) tab, click the Go To URL link. This will open it in a new browser tab. Copy it to the clipboard. In our case, it looked like: <https://tudor544.wixsite.com/wix-code/thankyou>

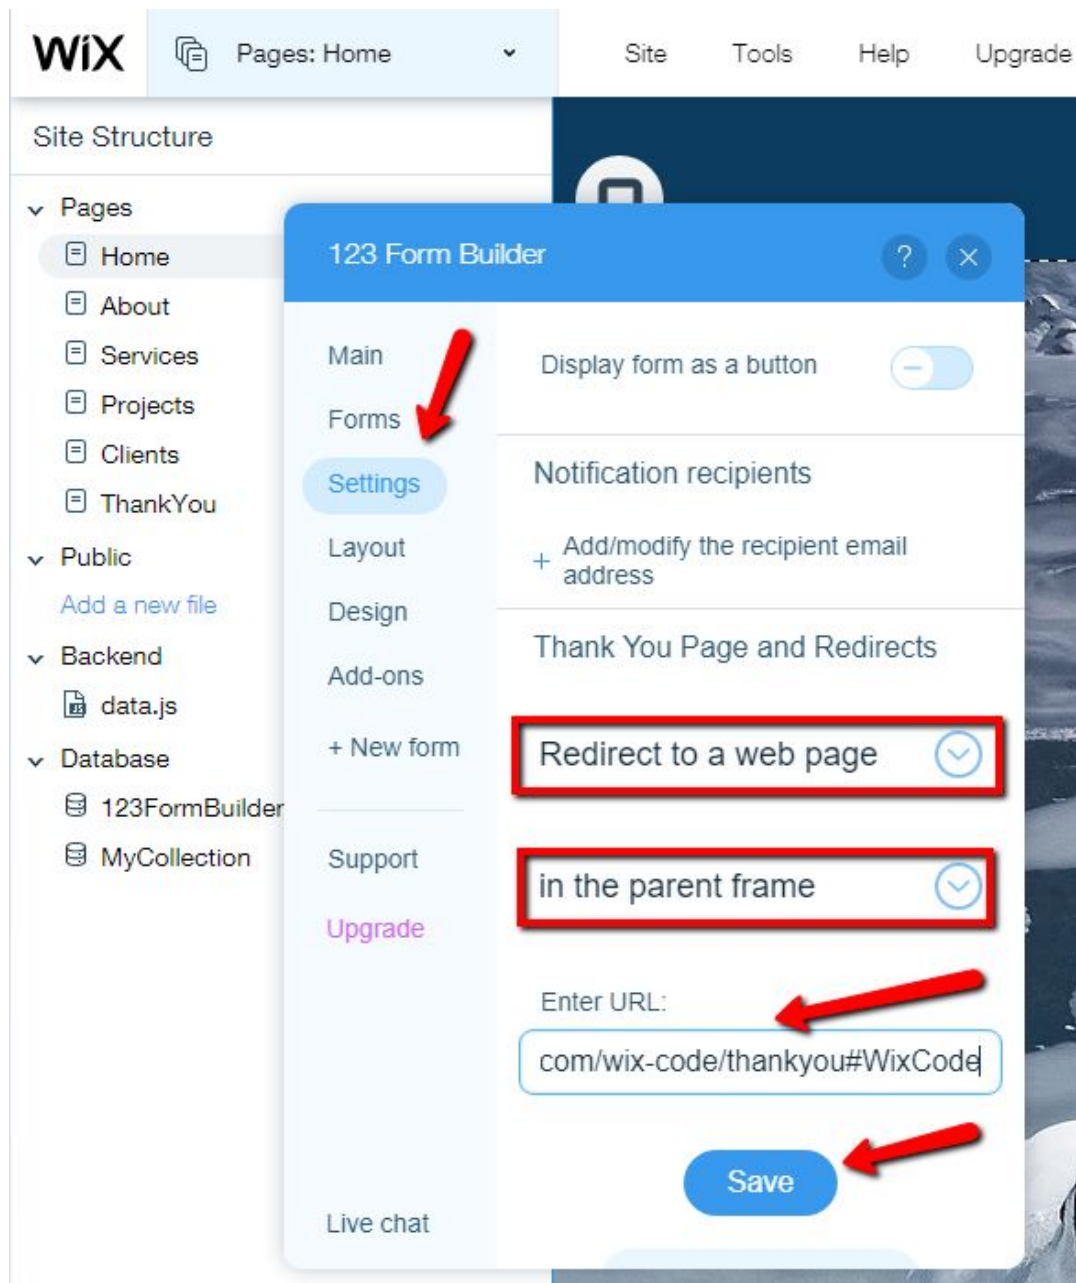

Step 6. At the end of the link, add #WixCode

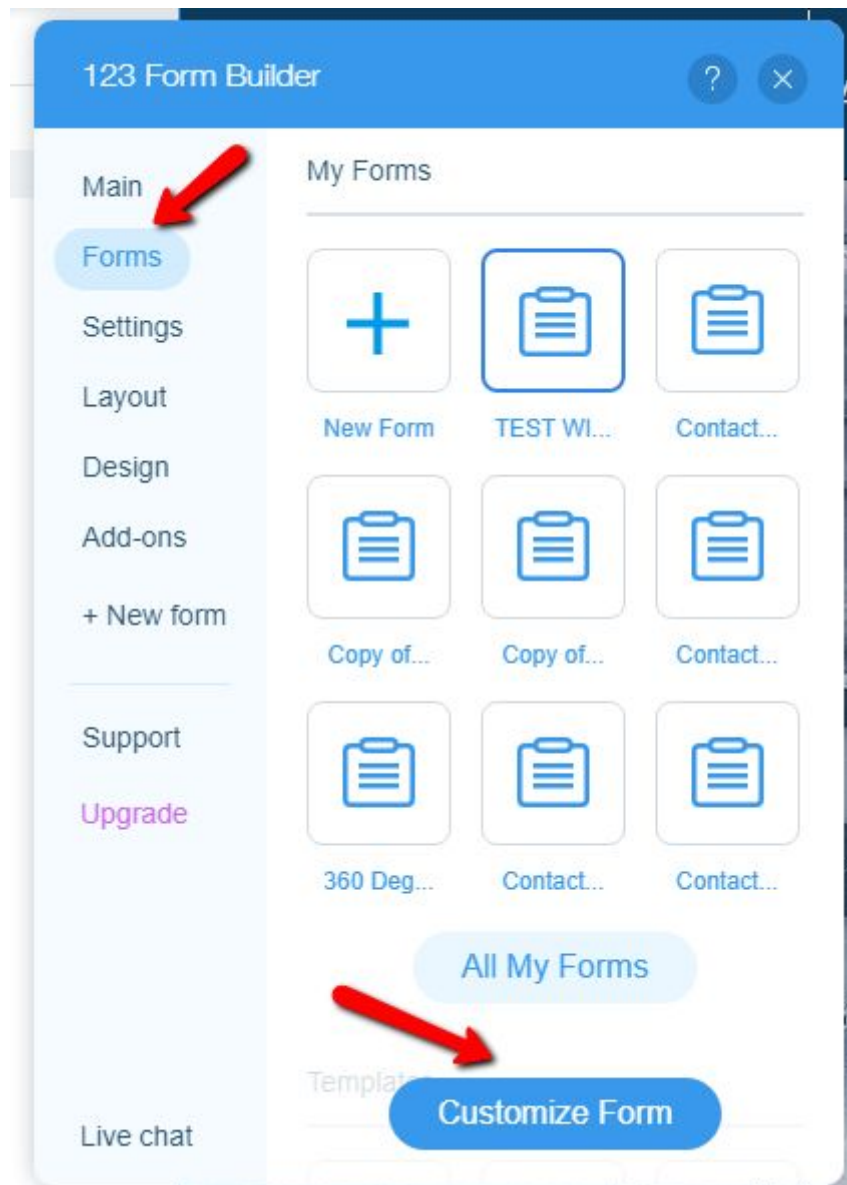

In our case, the link now is: <https://tudor544.wixsite.com/wix-code/thankyou#WixCode>

Step 7. Go to the 123FormBuilder app in Wix, select the Setting tab

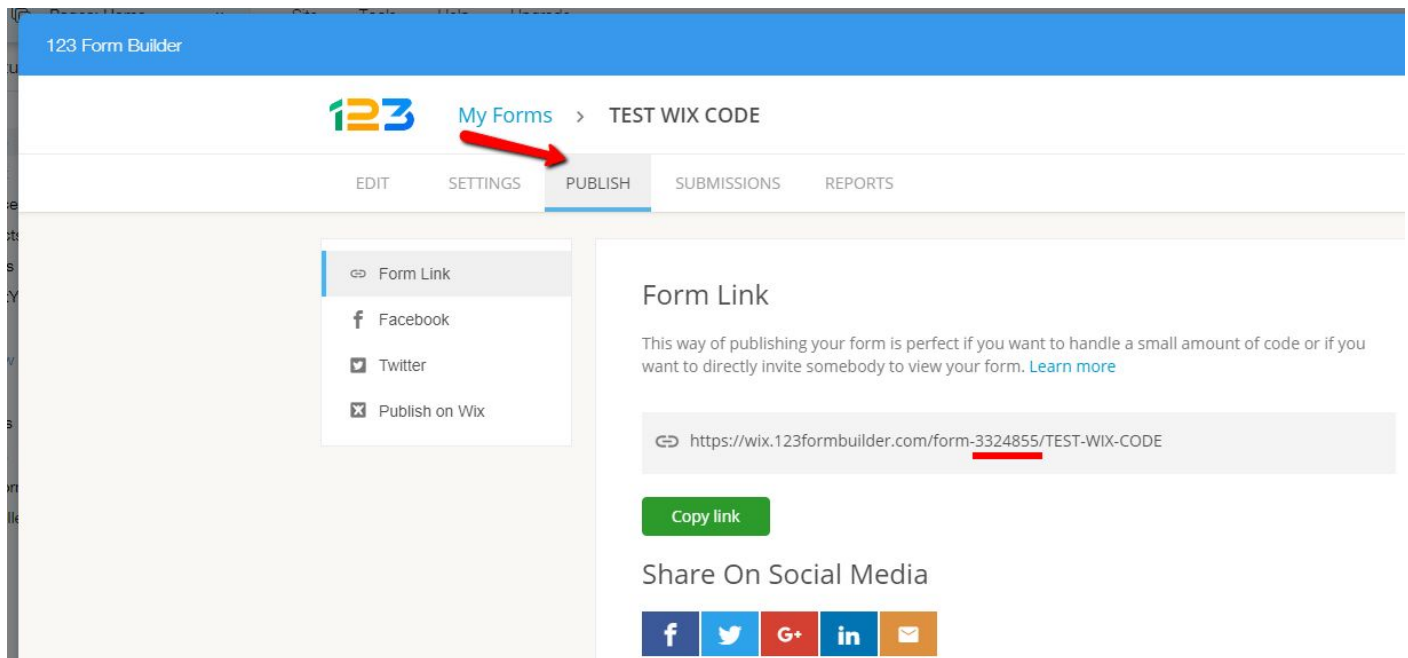

- select: Redirect to a web page
- select: in the parent frame
- Paste the URL that you have created in Step 6

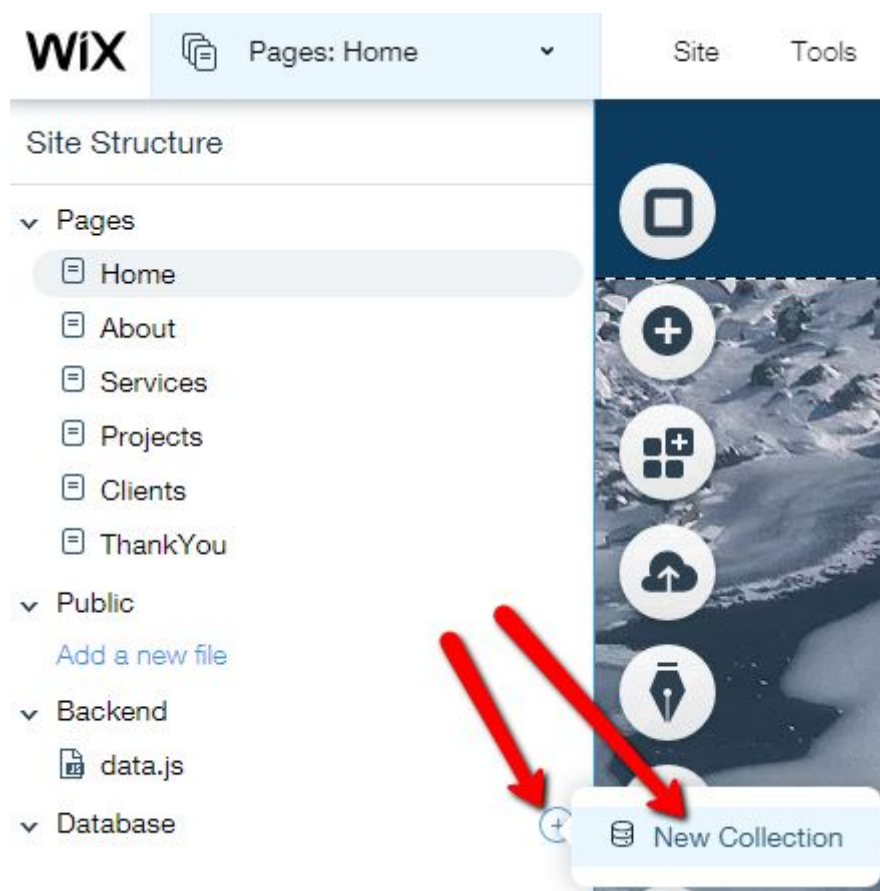

Step 8. Go to the 123FormBuilder app in Wix, select the Forms tab, then click the Customize Form button

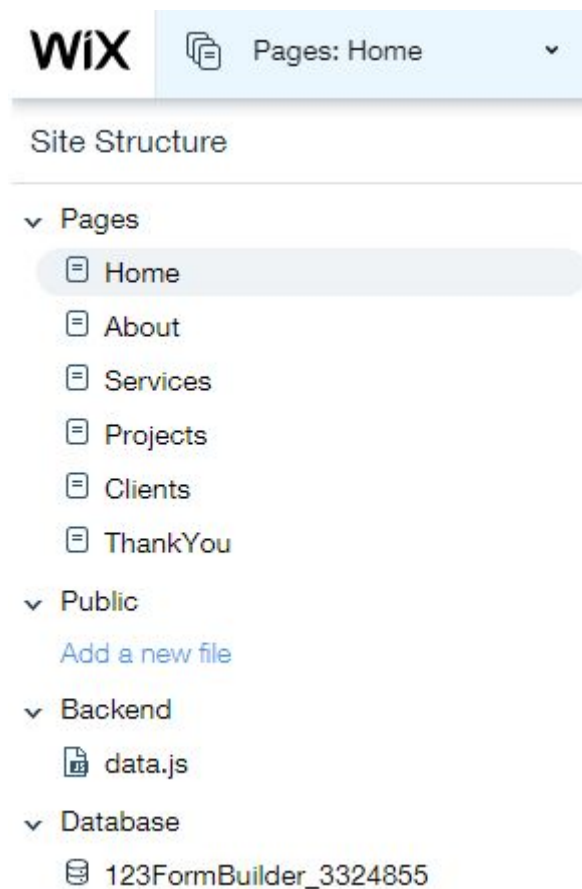

Step 9. In the lightbox that appears, click the Publish. On the page that is opened, identify the FormID, which is numerical, for example: 3324855

Step 10. Go back to the Wix editor, locate the Database category, and click New Collection

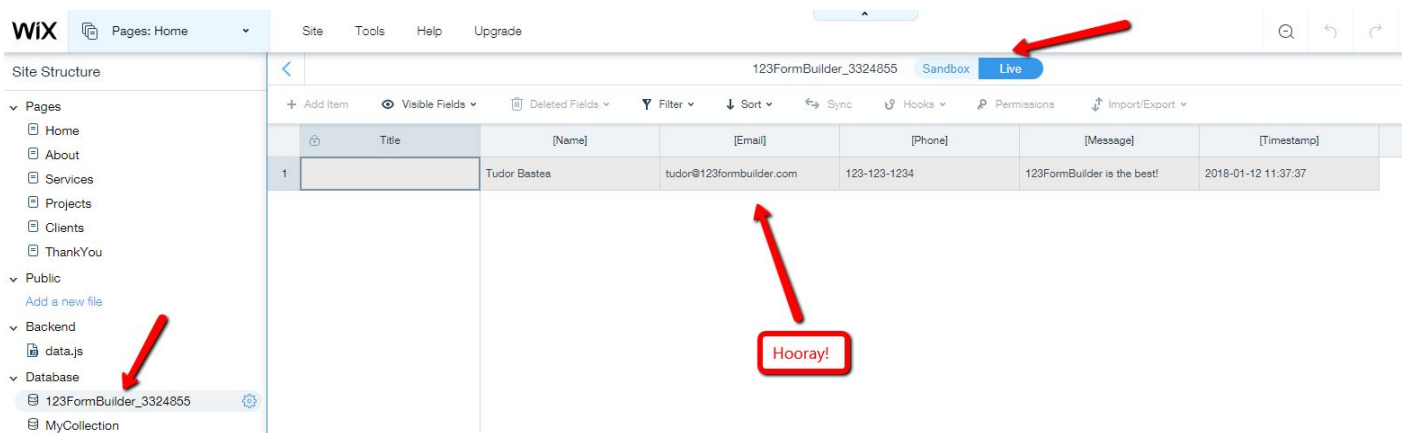

Step 11. You MUST name the new collection like this: 123FormBuilder_3324855 (of course, you have to use your own FormID, and not the one we use in this tutorial). It will then appear under Database:

That's all, folks! Now you can test that it works. Just go to the Wix page that has the 123FormBuilder form and fill it. If you did all the steps correctly, this should happen:

- After the submit, you are redirected to the ThankYou page
- The data automatically appears in the Wix Code data
